

A secure video streaming service from NETmc Marine.

videoSEE enables several viewers to remotely view live video feeds from a vessel, ROV, diver or offshore installation:

- Minimal vessel setup required
- Uses client's own internet connection
- View on any device which is internet enabled for video - PC, laptop, mobile phone or tablet.

Using the *videoSEE* multi-view facility more than one video feed can be viewed simultaneously - including video from different vessels. The viewer can then select one of the views for enlarging if they wish.

videoSEE allows you to monitor critical situations from almost anywhere with internet accessibility, ensuring that information is shared with the right people and enabling decisions to be made in a timely fashion.

Applications include:

- ROV intervention
- diver support
- coordination of multi-vessel operations
- analysis of critical situations

videoSEE is a rental service provided by NETmc Marine and can be hired for short and long-term periods. A secure log-on ensures that only you see your video.

Video quality is dependent on video source, client's ship to shore bandwidth, number of video images being transmitted, viewer's hardware specifications and IT settings.
